

Cloud Based WiFi Hotspot Solution

About LigoWave

LigoWave develops high performance wireless solutions with emphasis on innovation, versatility, and affordability. Our team strives to revolutionize the way people see wireless with the ultimate goal to better connect the world; we have succeeded in doing so by putting our products in the hands of customers in over 150 countries. Our products have connected people and empowered a previously thought impossible. We know the relentless desire for data will

them in ways previously thought impossible. We know the relentless desire for data will prompt new and demanding wireless applications, and it is our goal to drive the market as a leading solutions provider.

Originated in the United States, LigoWave started in 2007 as a team dedicated in developing quality wireless networking equipment for the wireless broadband and enterprise markets. Our commitment to excellence has not faltered over the years and has propelled us to grow into an international brand today. Our operation has expanded worldwide with over 10 offices and service centers in North America, Europe, and Asia. LigoWave designs and manufactures products in our own facilities to ensure maximum performance and consistent quality.

Wireless is the future. This belief is what drives us every day. Starting with marketing, progressing to R&D and later migrating to manufacturing, and then moving to sales and support, our united passion for wireless inspires new solutions that will change the way we interact with wireless technology.

LigoWave Cloud Wi-Fi coverage

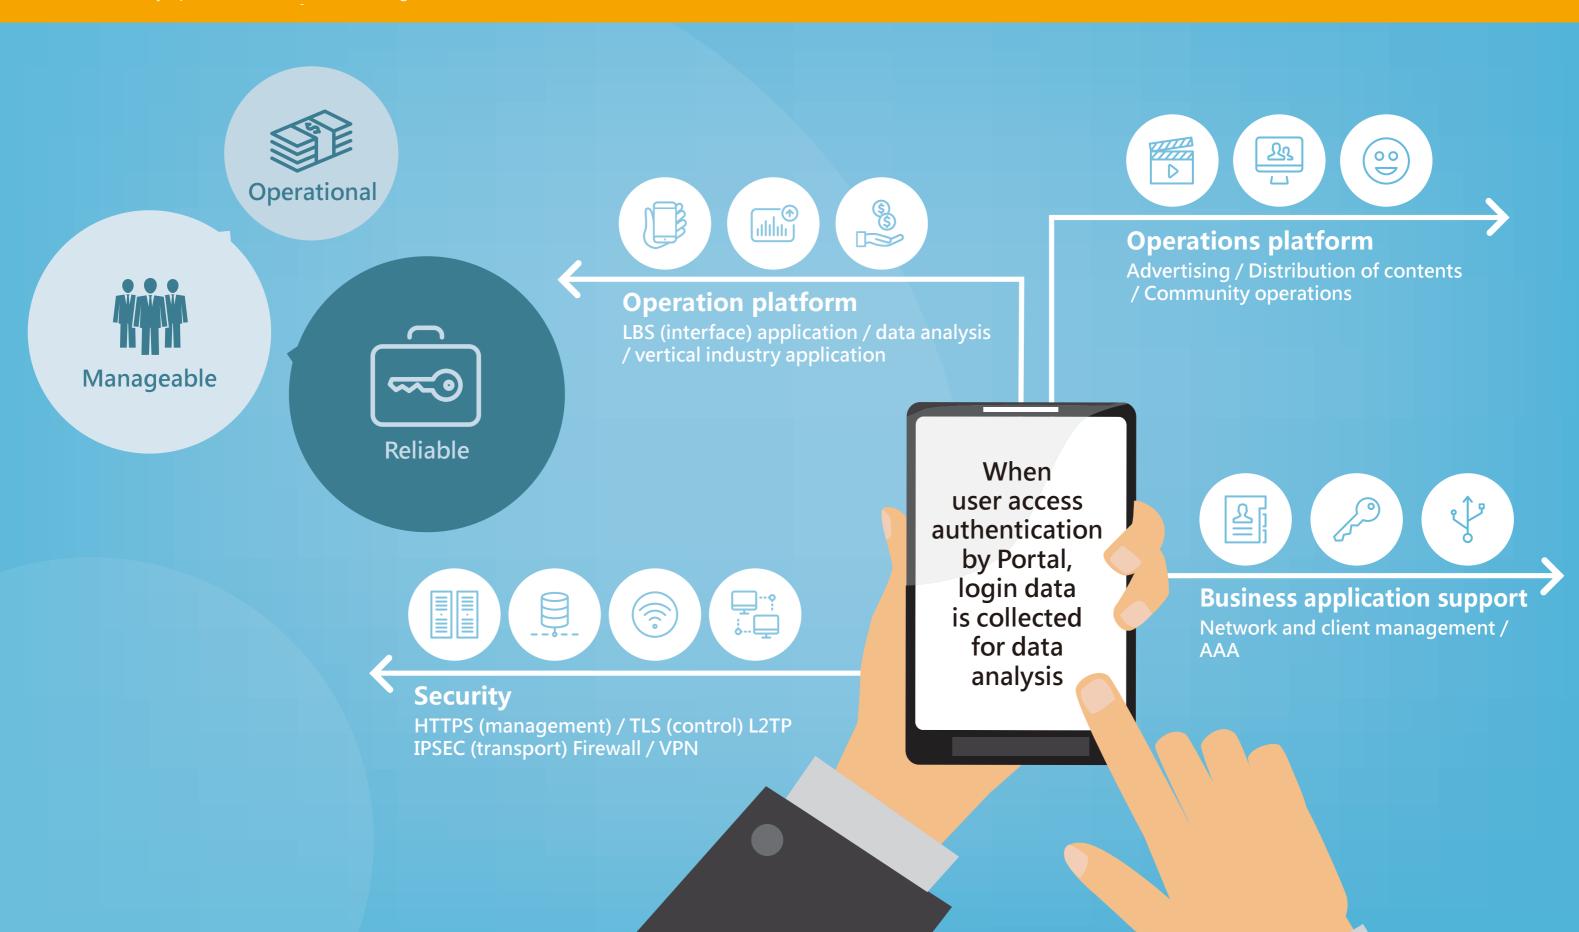

Cloud services have revolutionized the businesses and consumers around the world, we can help our customers easily manage a private cloud to explore important business opportunities and operations.

P2

Wi-Fi Cloud Features

One and only operational Wi-Fi cloud coverage solutions

P4

Wi-Fi Cloud Coverage Application

Chain stores industry Wi-Fi platform
Stores, supermarket chains, hotel chains, car 4S shop, etc

Network Service station Wi-Fi platform Business hall, Lottery stands, Bus station

Public Wi-Fi platform
Shopping malls,
Schools, Railway stations,
Hospitals

P6

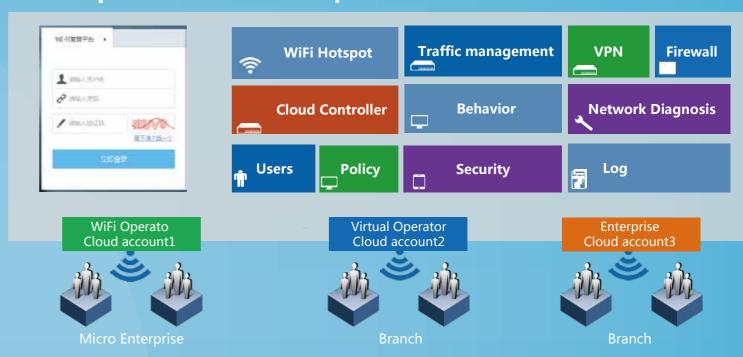

Private cloud platform mode Wi-Fi

Cross-regional management system

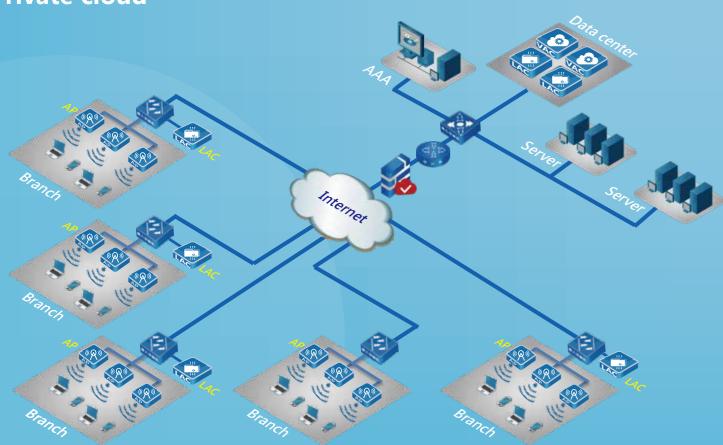

Simply deployed at corporate headquarters Wi-Fi platform, can cross-regional unified management of all branches of their Wi-Fi network, but branches also have rights to manage independently of their local Wi-Fi

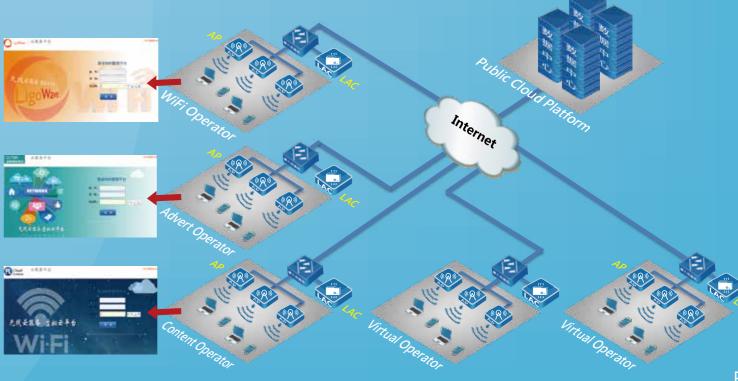

Virtual private cloud Wi-Fi platform : Cloud.xxxx.com.cn

Private cloud

Private cloud platform model

 $\mathsf{P8}$

Virtual private cloud Wi-Fi platform- Provide Virtual

Virtual Operators

Local Wi-Fi operator

Owning the Wi-Fi devices and control over the access network to internet, independent operating rights

Earning from Ads operating

Earning from Ads

Content distribution profit sharing

Get revenue from content distribution platform

Community operations

Build and operate community platform for local business to benefit from it

Build own virtual business circle, share the user group database Independent advertising model, precision marketing, and large data mining

Diversified revenue model

SMS verification code embedded with advertising, Portal multistage page advertisements; social tool login page embedded with advertising
